

# **POSITIVE DISPLACEMENT BLOWER** **AERZEN HIGH VACUUM BLOWER**

For moving practically any gases in a high vacuum

**AERZEN**

# POSITIVE DISPLACEMENT BLOWER FOR INDUSTRIAL HIGH VACUUM TECHNOLOGY. FROM AERZEN, OF COURSE.

With experience in the construction of positive displacement blowers since 1868, AERZEN continues to set new standards in quality and innovation in relation to twin-shaft positive displacement machines. As a result, AERZEN belongs to the pioneers in compressor technology, and is now one of the leading manufacturers worldwide.

## Customer benefit thanks to technical progress.

AERZEN can look back on over 70 years of experience, particularly in the field of vacuum technology. Technical competence, experienced employees and continuous exchange with customers form an excellent basis for successful new developments by AERZEN. AERZEN always gives priority to customer benefit. Innovative products by AERZEN ensure that plant manufacturers and plant operators can achieve sustainable success in the market.

## Application fields and use.

AERZEN HV-type blowers are designed for moving almost any gas and are especially used in industrial high-vacuum technology.

With a total of 19 sizes, the blowers cover nominal displacement intake volume flows from 180 m<sup>3</sup>/h to 97,000 m<sup>3</sup>/h and pressure ranges from 10<sup>-3</sup> mbar abs. up to approx. 200 mbar abs.

*4-stage vacuum plant with 2 x 30,000 m<sup>3</sup>/h intake volume flow in steel degassing*

*3-stage pumping set for 2 x 12,000 m<sup>3</sup>/h in vacuum coating technology*

**Fields of application:**

- Vacuum coating technology
- Chemical processes
- Metallurgy/ construction of melting furnaces
- Steel degassing
- Packing industry
- Central vacuum systems
- Helium leak detection units
- Manufacture of light bulbs and tubes
- Drying technology
- Machine construction
- Electronics
- Automotive industry and much more

# ENERGY EFFICIENCY IS A CATCH-PHRASE OF OUR TIMES – AND AT AERZEN, IT IS STANDARD.

**AERZEN standards for blowers and compressors have always been high. And now, they are being applied to drive units, too. IE 3 motors ensure maximum energy efficiency.**

**And AERZEN standard motors are already certified for use in several markets, including the US, Canada and Russia, and are suitable for frequency converters.**

## **Design and construction**

AERZEN vacuum blowers are provided with fluoro rubber (FKM) O-ring seals at the casing flanges. Further important advantages of the blower stage are vacuum tightness and air cooling. Lubrication oil is supplied by splash lubrication. The lubricant can be mineral oil, as well as PFPE oil, which is mostly used for conveying oxygen. The HV series is equipped with a special oil slinger-piston ring-labyrinth seal between the conveying chamber and the bearing chambers. Additionally, an amply dimensioned neutral chamber with condensate channels is installed. In addition, the neutral chamber can be purged with seal gas, in order to achieve an increased sealing effect. The sealing of the drive shaft is guaranteed by double radial seal rings (FKM) with an oil chamber. The blower is driven by direct coupling with motor. The driving unit consists of a cast connecting piece with perforated plate cover, flexible coupling and flanged B5-motor, equipped as per IEC standard and additionally with 3 PTC resistors. As standard, IE 3 motors are used for maximum energy efficiency. AERZEN standard motors are already certified for use in several markets, including the US, Canada and Russia, and are suitable for frequency converters.

## **Modifications: Options**

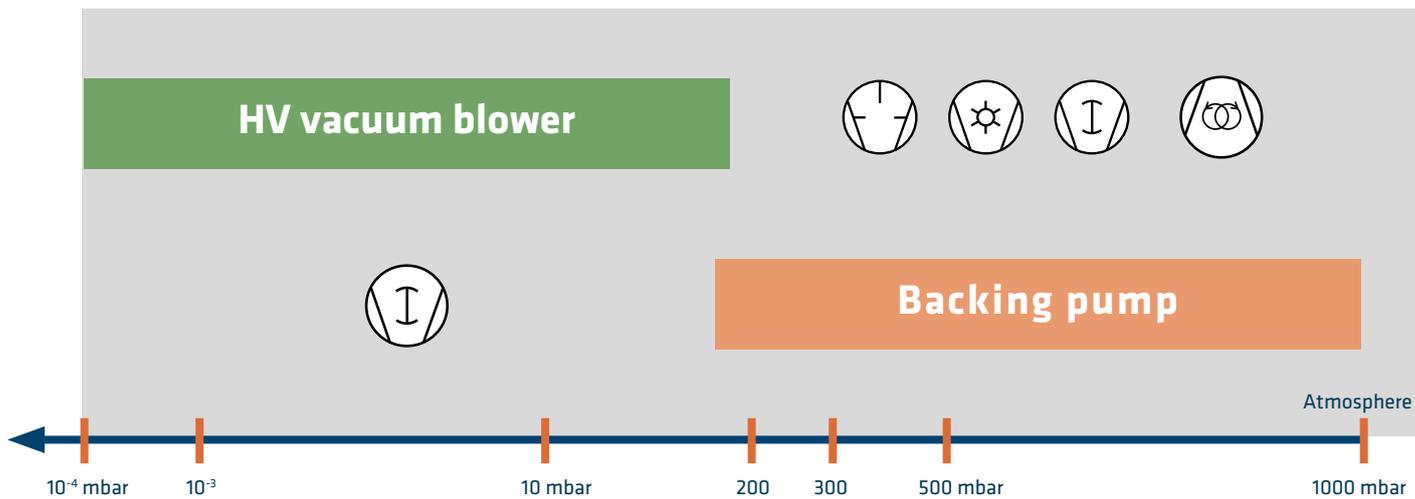

- ATEX approval as per 94/9/EG for zones 0 (internal), 1 (internal + external), 2 (internal + external)
- Housing parts constructed of nodular cast iron
- Rotary pistons and housing parts made of steel casting and CrNi steel casting
- Pressure-proof housing
- wHV series heatable blowers
- Gastightly closed rotary pistons
- Water-cooled seal ring housings
- Use of oxygen-compatible lubricants and seals approved for oxygen
- Teflon sealed housing flange connections
- Special designs for helium applications

## **Advantages for the customer**

- Largest vacuum blower series with 19 sizes and volume flows of 180 m<sup>3</sup>/h up to 97,000 m<sup>3</sup>/h
- ATEX certification as per 94/9/EG even for zone 0 (internal)
- Energy-saving thanks to IE 3 motors
- Easily select the right blower for you thanks to fine-structured steps of volume flows
- Due to high mechanical loading capacity (stage up to 200 mbar - in case of drive, depending on selected motor rating up to 140 mbar) considerable reduction of pumping-down times
- Variable adaptation to special applications through a wide variety of possible modifications
- Vertical and horizontal installation position
- Variable direction of flow (up to 2,800 m<sup>3</sup>/h even both-sided)
- AERZEN's reliability and experience (more than 35,000 vacuum blowers in use world-wide)
- World-wide sales and service system
- Excellent price-/performance ratio
- Quality – Made in Germany

*Certified safety: ATEX compliant design*

**ATEX**

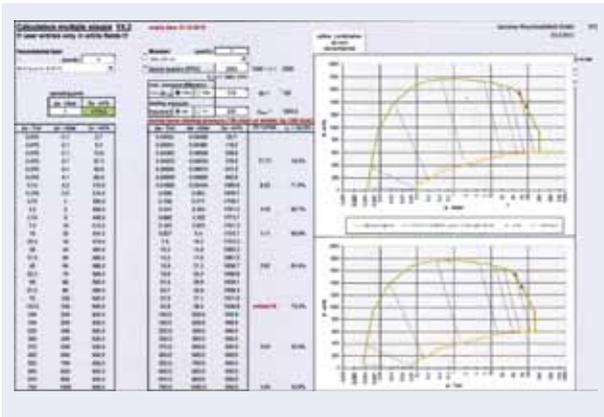

AERZEN HV series vacuum blowers, as well as CM series blowers with canned motor drives are type-tested (according to Guideline 94/9/EG) and certified for ATEX-zone 0 (internal), temperature class T3 (200 °C). Externally, the blowers are approved for zone I, temperature T4 (135 °C).

*Vacuum blower stage GMa 13.f7 HV with ATEX design with oil level and vibration monitoring*

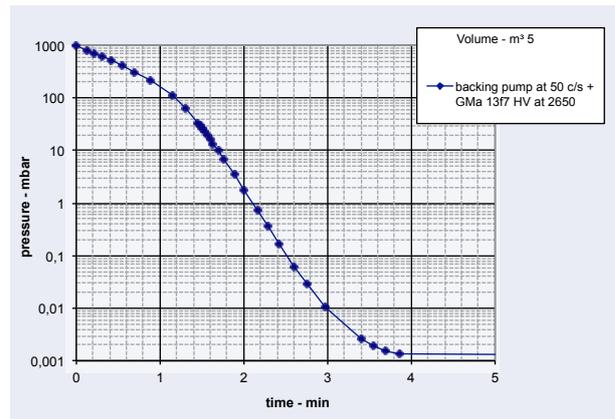

# DESIGN IS OUR STRENGTH! CHALLENGE US.

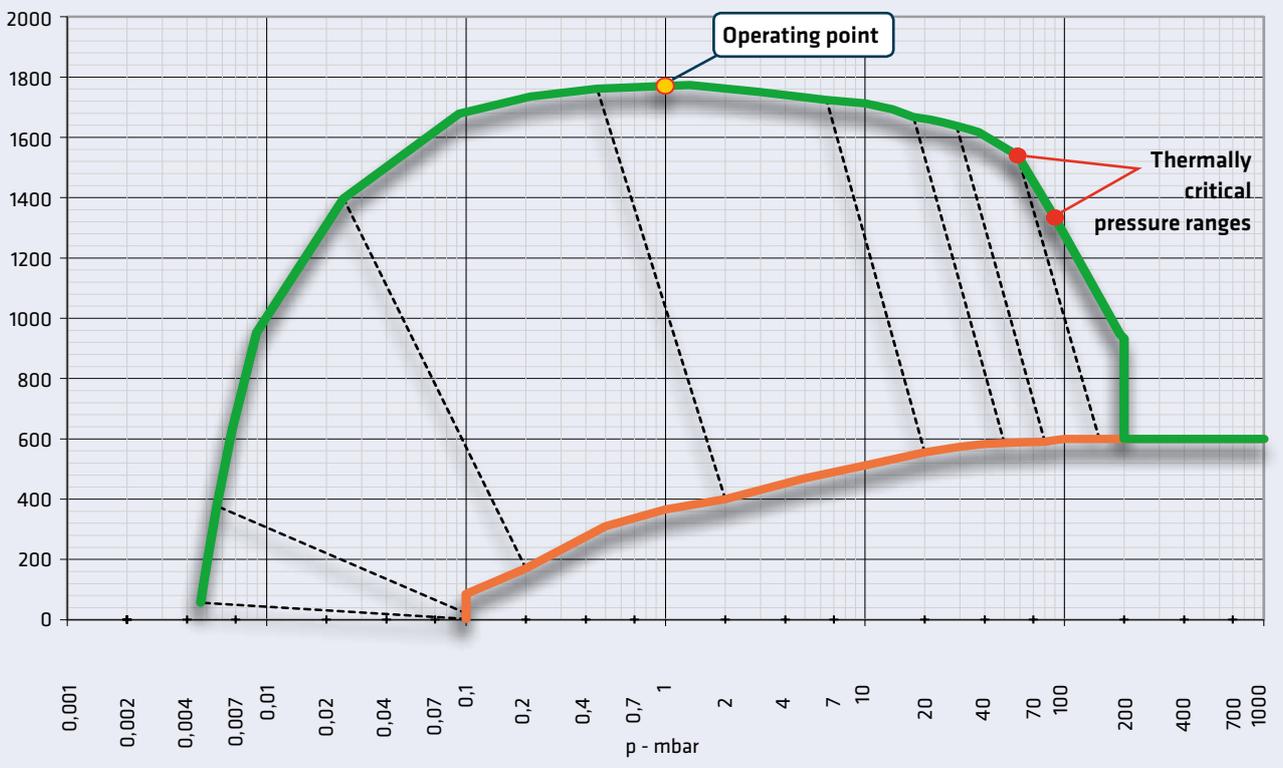

Using extensive software, we review the combination of booster pump and other AERZEN vacuum stages specified or planned by the pump set by the vacuum system design engineer. We pay special attention to thermally critical pressure ranges and optimize the step ratios for energy efficiency.

Programs for designing pump sets ascertain ...

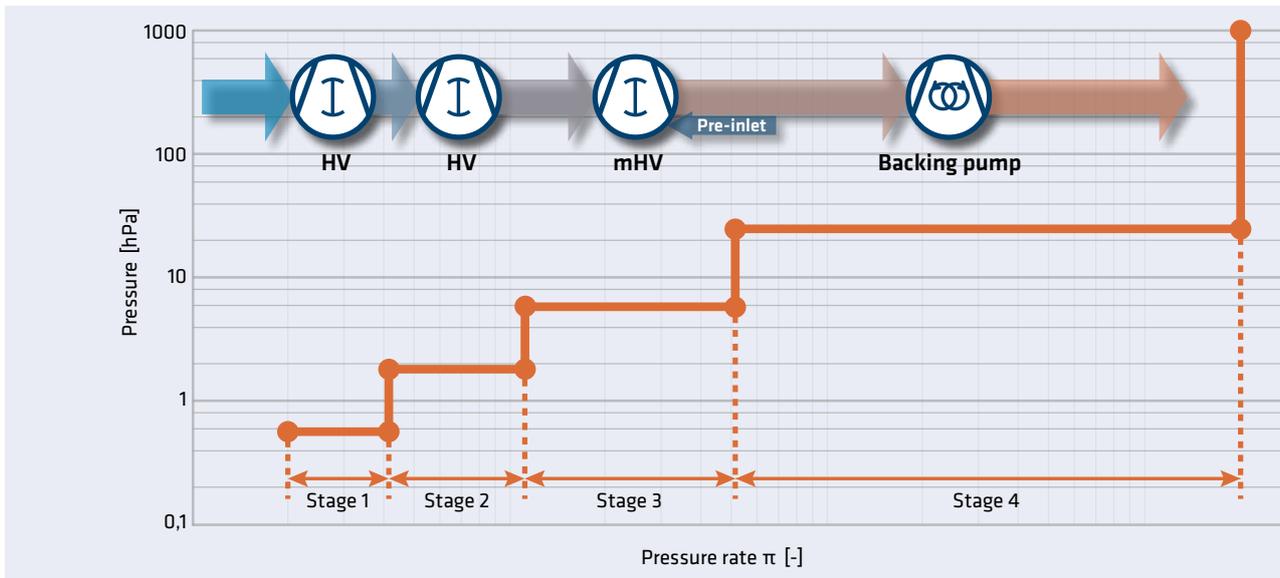

... pump-down times appropriate for the specified flow volume

- Backing pump at 50 Hz
- AERZEN vacuum blower GMa13f7 HV with 2850 rpm, differential pressure\_max: 110 mbar, p\_start: 200 mbar
- Critical point
- Operating point

AERZEN vacuum blowers being used for steel degassing at a steel plant.

Example of a 4-stage pump set: stages 1 and 2 with HV blower

4-stage vacuum system with  $2 \times 30,000 \text{ m}^3/\text{h}$  intake volume in steel degassing

# INDIVIDUALIZED DESIGN SIGNIFICANTLY EXPANDS THE RANGE OF APPLICATIONS.

Thanks to a comprehensive modular system, various motor frame sizes can be fitted on standard model AERZEN vacuum blowers.

### Example:

Required is a Roots type blower with a theoretical intake volume of 375 m<sup>3</sup>/h at  $\Delta p = 140$  mbar.

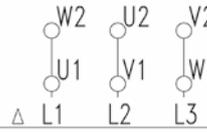

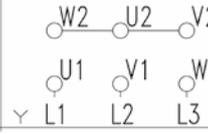

### Selection:

Theor. intake volume  $Q_0 = 375 \text{ m}^3/\text{h} > 400 \text{ m}^3/\text{h}$  selected  
planned  $\Delta p = 120 \text{ mbar} > 160 \text{ mbar}$  selected

### Result:

GMa 10.2 HV with 3250 rpm and a 2,2 kW motor frame size 90 L.

# GETTING TO THE POINT. THE OPERATING AND PERFORMANCE DATA.

AERZEN high vacuum blowers are sturdy standardized products and designed to suit a wide variety of applications. The largest vacuum blower product group comprises 19 sizes in 11 connecting flange sizes from DN 50 to DN 800 and features intake volume flows from 180 to 97,000 m<sup>3</sup>/h.

**AERZEN. Compression as success factor.**

AERZEN was founded in 1864 as Aerezener Maschinenfabrik. In 1868 we built Europe's first rotary lobe blower. The first turbo blowers followed in 1911, the first screw compressors in 1943, and in 2010 the world's first rotary lobe compressor unit. AERZEN innovations are a driving force behind the development of compressor technology. Today AERZEN is one of the world's oldest and most important manufacturers of rotary lobe blowers, rotary lobe compressors, rotary lobe gas meters, screw compressors, and turbo blowers. And in many areas of application, AERZEN is among the undisputed leaders.

There are more than 2000 experienced AERZEN employees in over 43 subsidiary companies worldwide working hard to advance compressor technology. Their technological expertise, our international network of experts, and the constant feedback from our customers are the basis of our success. AERZEN products and services are setting standards in the industry for reliability, lasting value, and efficiency. Go ahead: challenge us!
