

Energy Saving Refrigerated Air Dryers

DES SERIES 90 to 675 scfm (153 to 1148 nm3/h)

> Deltech

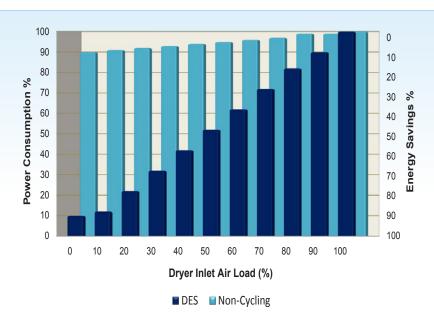

Load Matching Profile for Sustainable Energy Savings

Energy costs continue to escalate globally, having a negative impact on plant profitability and production costs. Sustainability initiatives in plant operations must be implemented to maintain a competitive advantage.

The DES Series Refrigerated Compressed Air Dryers are the ideal solution. By matching power consumption to compressed air demand power costs are lowered and productivity is improved.

The graph provides a baseline comparison of power consumed between non-cycling dryers and the DES Series.

Non-cycling dryers operate with the refrigeration compressor running continuously, regardless of inlet load conditions. Minimal energy savings are realized from 100% down to 0% inlet air load.

DES Series dryers automatically cycle (on/off) the refrigeration compressor in response to inlet load conditions. As the inlet air load is reduced, the power requirement to dry the air is matched in proportion to the demand.

For example, at 60% inlet air load, a non-cycling dryer consumes 96% of the full load power consumption, a 4% energy savings. By compariosn, at 60% inlet air load, a DES Series dryer consumes 62% of the full load power consumption, a 38% energy savings.

The load matching design reduces power costs and saves energy. The example to the left provides annual DES energy savings with respect to noncycling designs.

Example:

- Air Dryer: Model DES540 rated for 540 scfm (917 nm³/h) at ISO 7183 (Option A2) conditions
- Operating Time: 8,000 hours
 Cost Of Power: \$0.10/kWh
 Average Inlet Air Load: 60%
 Annual Energy Savings: \$946

Delivers ISO 8573.1 Quality Class Air

The International Organization for Standardization (ISO) identified three forms of contamination as common in compressed air systems - solid particles, water and oil. ISO Standard 8753.1: 2009 categorized each contaminant and assigned a quality class, ranging from Class 0, the highest purity level, to Class 9, the most relaxed.

The DES Series effectively removes all three contaminant forms in a single air treatment system.

Innovation at Work

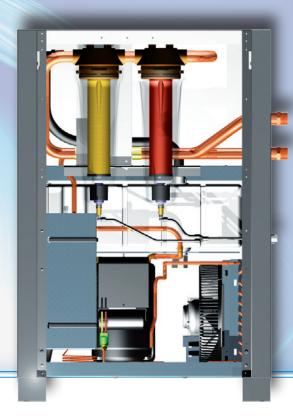

The standard dryer is equipped with a Grade D filter/separator-

- ISO Quality Class 3: Solid particle removal
- ISO Quality Class 5: Pressure dew point
- ISO Quality Class 5: Remaining oil concentration

Optional PYRAMID™ Grade Filtration-

- ISO Quality Class 1: Solid particle removal
- ISO Quality Class 1: Remaining oil concentration
- ISO Quality Class 5: Pressure dew point

The annual purchase of a maintenance kit provides a lifetime of ISO Quality Class Air.

ISO 8573.1 Quality Classes

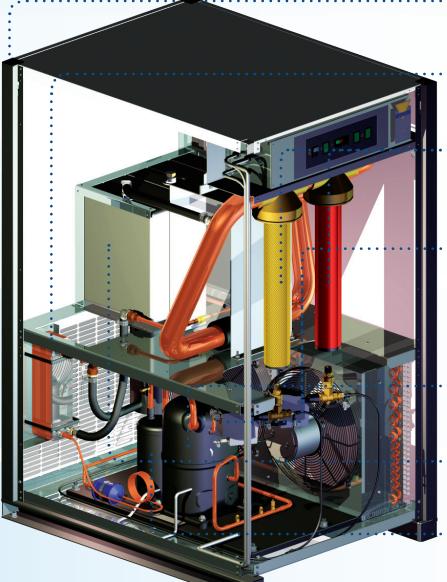

To best define your air quality requirements for specific applications, please refer to the table below.

		Solid Particles		Humidity	and Water	Oil			
Air Quality Classes	Maximu	ım number of particles	s per m³	Maximum Pres	auma Daux Daint	Maximum Concentration,			
ISO 8573.1		Particle size (d), $\mu {\rm m}$		waximum Pres	sure Dew Point	Aerosol, Liquid and Vapor			
	$0.10 < d \le 0.5$	$0.5 < d \le 1.0$	1.0 < d ≤ 5.0	°C	°F	mg / m ³	ppm w/w		
0		As specifie	d by the equipment	user or supplier a	nd more stringent	than class 1			
1	≦ 20,000	≦ 400	≦ 10	≦ -70	≦ -94	≦ 0.01	≦ 0.008		
2	≤ 400,000	≦ 6,000	≦ 100	≦ -40	≦ -40	≦ 0.1	≦ 0.08		
3	-	≤ 90,000	≦ 1,000	≦ -20	≦ -4	≦ 1	≦ 0.8		
4	-	-	≤ 10,000	≦ +3	≦ +37	≦ 5	≦ 4		
5	-	-	≦ 100,000	≦ +7	≦ +45				
		Mass Concentration	1

* Not Specified Per ISO 8573.1: 2009

Rebate Ready Energy Saving Design

Optimized Cabinet Design

- · Promotes ease of access from all four sides
- Certified to CSA C22.2 No. 236-05 / UL 1995

Stainless Steel Brazed Plate Heat Exchangers

- · Compact, thermally efficient
- Ensures delivery of an ISO 8573.1: 2009 Air Quality Class 5 pressure dew point

• Integral Filtration

- Standard Filter/Separator removes solids down to 3.0 microns and oil aerosols to 5.0 mg/m³
- Optional PYRAMID™ Grade Filtration captures solids to 0.01 microns and oil aerosols to < 0.01 mg/m³

· No Air Loss Condensate Drains

*Standard on all models

- Mechanical float drain are standard on models 90-140 scfm (153-238 nm³/h)
- Electric demand drain are standard on models 190-675 scfm (323-1148 nm³/h)

· · Hermetically Sealed Refrigerant Compressor

- Environmentally friendly R-134a refrigerant
- High reliability, long service life

· · Rugged Glycol Reservoir

- · Stores food-grade propylene glycol cooling media
- · Leak-free, rotational molded construction

· · Reliable Thermal Media Circulation Pump

- Continuously moves cooling medium through the dryer
- Cartridge design promotes reliability and ease of service

DES Series Options:

- Advanced Electronic Controls emm+[™] (models 190 to 675 scfm)
- Optional upgrade to a PYRAMID™ Refrigerated Drying system.
- NEMA 4 electrics (models 190 to 675 scfm)
- Water-cooled condensing unit (models 190 to 675 scfm)
- Low ambient protection
- 3 valve block and by-pass
- Four gauge package (panel mounted)

DES Series Operation

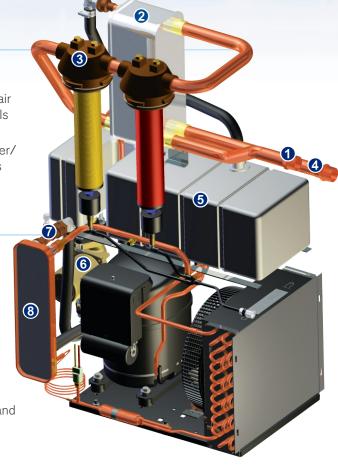

Stages of Operation

The Drying Process-Compressed Air Circuit

- Warm, saturated compressed air enters the dryer through the inlet pipe connection.
- 2 Air travels through the air-to-air heat exchanger and the glycol-to-air heat exchanger. Propylene glycol surrounds the passages and cools the air to the desired pressure dew point.
- Moisture, solid particulates and oil aerosols are removed by the filter/ separator. A no-air-loss condensate drain discharges contaminants from the system.
- 4 Dry, filtered air exits the dryer for use.

The Cooling Process-Glycol Circuit

- **6** Glycol exits the air-to-glycol heat exchanger and then enters the glycol storage tank.
- **6** A circulation pump continuously moves the thermal medium throughout the circuit.
- A thermal sensor monitors the gylcol temperature and turns the refrigeration compressor off whenever the gylcol is cooled to its lowest temperature. The cooling medium continues to dry the air. After the medium warms up, the thermal sensor restarts the refrigeration compressor.
- The glycol-to-refrigerant heat exchanger chills the thermal media and travels back to the air-to-glycol heat exchanger.

TWO LEVELS OF CONTROLS

Standard Level I (DES90-DES675)

Easy to monitor controls provide dryer status

- Dryer on/off switch
- · Dryer on light
- Thermal medium temperature
- Dryer energized (DES190-HES675)
- · Compressor on light

Standard Level I (DES90-DES140

Optional Level II (DES190-DES675)

DES Series emm+™ microprocessor controller

- Operator Interface Displays:
 - Date/time/operating status
 - Hours to service
 - Total compressor operating time
- Energy Savings Interface:
 - Daily average load
 - Monthly average load
 - Annualized energy savings in Dollars or Euros
 - Scheduler mode for automatic start/stop operation

Optional Level II (DES190-DES675)

Customer Support Solutions

"Peace of Mind"

As an extra measure of protection, Deltech provides an extended warranty beyond the standard 2 year coverage.

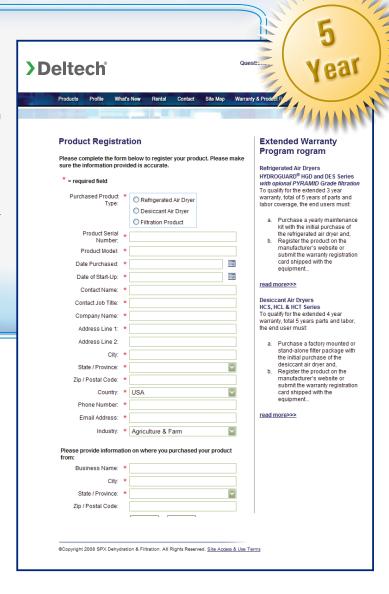

Purchase a maintenance kit on an annual basis and receive an additional 3 years of protection, parts and labor.

All major components are covered.

Register on-line

Receive automatic email reminders that it's time to service your product
